The invention relates to an ophthalmic lens for
constituting an ophthalmic display, associated with an
5 optical imager for shaping light beams and directing them
towards the eye of the wearer so as to enable information
content to be viewed, said optical imager being secured
to said lens. According to the invention, the lens is
associated with marking including referencing for the
10 position of said imager relative to said lens as a
function of the correction parameters of said lens.
